

Network Services

IT Support made simple, effective and affordable.

INTERNET CONNECTIVITY

Boundary IT Services offer a complete range of internet connectivity solutions. We can procure, install and support high speed broadband connections to enable all of your users to access the internet seamlessly and securely.

REMOTE SITE CONNECTIONS

For more complex organisations with multiple locations we can implement site to site connections using your existing Broadband connection. If you require a more robust solution then we can implement LAN extension circuits for point to point connectivity, or MPLS (Multi-Protocol Label Switching) which enable you to create a multi point LAN securely across the internet.

WIRELESS NETWORKS

Wireless networking offers a cost effective alternative to hard wired networks, giving you the flexibility to extend your IT network throughout your entire site. **Boundary IT Services** can design, install and support all types of wireless networks to suit all budgets. For small office environments we can implement a straight-forward wireless access point, enabling you to easily connect laptops and other mobile devices to your company LAN quickly and securely.

For larger office environments, schools and factories we can implement a blanket wireless solution. This enables the central administration of dozens of wireless access points, giving you consistent wireless access across your entire site. Users can freely roam between these access points without losing connectivity.

DATA CABLING

Boundary IT Services can install network cabling from a single network outlet to a multifloor / building environment over copper or fibre. We can design, install, certify and upgrade business of all sizes integrating new technologies and infrastructures.

WEBSITES & DOMAIN NAMES

Boundary IT Services offer a professional, highly reliable web hosting solution to small businesses. We can assist you with:

- **Domain Name Registration**
- **Website Hosting**
- **Email Hosting**
- **Website Design**
